

1 Verbatim Environment

Normal **Bold** stuff.

Verbatim 1:

```
AbNormal {\bf NonBold} stuff.
```

Verbatim 2:

```
inside verbatim
\end {verbatim}
still inside verbatim
```

Verbatim 3:

```
keep this
AbNormal {\bf NonBold} stuff.
keep this too
```

outside verbatim More Normal **Bold** stuff.

Verbatim 4:

```
␣keep␣this
AbNormal␣{\bf␣NonBold}␣stuff.
keep␣this␣too␣␣␣␣
```

outside verbatim More Normal **Bold** stuff.

2 Inline verb command

Some inline `\verb` verbatim.

```
More a } b # c ^ d _ e $ f stuff;
And more a␣}␣b␣#␣c␣^␣d␣_␣e␣$␣f␣ stuff
Even in math  $a_b^2$ .
```

More inline `\verb` verbatim.

```
xx\verb{y. y
Nested | is allowed .
```

Note that spaces after a control-sequence are skipped on the *next* read, by which time catcodes may have been changed. Prior to April, 2020, a space following `\verb` would – surprisingly – have been treated as the delimiter! Since then, spaces are skipped and the following char (even `*`) is used as delimiter. We'll adopt the newer approach.

```
a}b#c^d_e$f stuff
rick-roll}
rick-roll}␣
+ i n o u t +
Input snippet
```

```
|a}b#c^d_e$f|
after.
```
